## **DETAILED ACTION**

### ***Election/Restrictions***

1. Applicant's election with traverse of Group II, claims 10-12, in the reply filed on November 29, 2007 is acknowledged. The traversal is on the ground(s) that "no adequate and/or examples have been provided to support a conclusion of patentable distinctiveness between the identified groups. This is not found persuasive because under PCT Rule 13.1 lack a single general inventive concept by lacking the same or corresponding technical features as described in paragraph 2 of the Office Action mailed October 29, 2007. Note that Applicants have not rebutted the Examiner's argument and supporting evidence of lacking the same or corresponding special technical features.

The requirement is still deemed proper and is therefore made FINAL.

2. Claims 1-9 and amended claim 13 are withdrawn from further consideration pursuant to 37 CFR 1.142(b), as being drawn to a nonelected invention, there being no allowable generic or linking claim. Applicant timely traversed the restriction (election) requirement in the reply filed on November 29, 2007. Note that amended claim 13 is directed to a process of using the invention of Group II for making aromatic amine by hydrogenation of an aromatic nitro compound. Further note that the claimed catalyst is of narrow scope when compared to the catalyst used in claims 1-9 and 13.

### ***Claim Rejections - 35 USC § 102***

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 10-12 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Buchanan et al. (U.S. Patent No. 5,759,944). The Buchanan et al. patent disclose a catalyst material comprising a Pt-Ni alloy supported on EC72R Carbon having a Pt:Ni atomic ratio of 50:50. See Column 3, lines 15-43.
